

## Summary Chart of U.S. Medical Eligibility Criteria for Contraceptive Use, 2010

Key:

No restriction (method can be used)

- Advantages generally outweigh theoretical or proven risks Theoretical or proven risks usually outweigh the advantages
- Unacceptable health risk (method not to be used)

This summary sheet only contains a subset of the recommendations from the US MEC. For complete guidance, see: www.cdc.gov/reproductivehealth/usmec

Most contraceptive methods do not protect against sexually transmitted infections (STIs). Consistent and correct use of the male latex condom reduces the risk of STIs and HIV.

| Condition                                      | Sub-condition  | Combined pill,  | Progestin-only pill | Injection       | Implant         | LNGIUD          | Copper-IUD      |
