Kids love to be with other kids, laughing and learning.

And you never know which viruses may ride home with them.

Questions About Childhood Vaccines?

How do vaccines help?

Vaccines teach your child's immune system how to recognize and resist the most serious germs.

On-time immunization is important to keeping your child's developing immune system on track.

If you have questions about vaccines or their timing, talk with your pediatrician. Working together, you can make informed decisions about your child's health.
